PROFESSIONAL SUMMARY

Mobile Software Engineer with 3 years of experience specializing in Flutter and Native Android (Kotlin). Skilled in building scalable multi-tenant architectures, advanced state management, and high-performance applications. Proven ability to own the full development lifecycle — from REST/gRPC & AWS integrations to CI/CD automation and OTA updates.

EXPERIENCE

Datacorp Traffic Private Limited, Bengaluru

Junior Software Engineer | Jun 2024 – Present

- Architected production Flutter and Native Android apps with REST/gRPC APIs and AWS S3 for traffic analytics and IoT.
- Designed reusable multi-tenant architecture supporting OTA updates and faster feature delivery.
- Implemented Runtime UI Factory for dynamic client-specific layouts without app releases.
- Owned performance optimization, architectural decisions, and Jenkins CI/CD pipelines (Bitbucket) for automated builds and deployments.

Flutter Developer – Intern | Oct 2023 – May 2024

- Built cross-platform Flutter applications with offline-first support, local databases (SQLite/Hive), responsive UI, and solid state management.
- Developed Django REST APIs and contributed to early versions of traffic & asset-tracking apps that later scaled to production.

ACHIEVEMENTS

- Received Product Champion Award for end-to-end ownership and successful delivery of Countlenz (800+ active users).

CORE PROJECTS

Countlenz (800+ Active users)

- Built a traffic counting system using Flutter, gRPC, SQLite, and joystick integration.
- Developed a Python + Bash auto-update system for seamless version delivery.

Sitelenz (Android + iOS)

- Developed a Flutter application for asset tracking, camera installation, and navigation using Mapbox API.
- Integrated BLoC state management and barcode scanning; published on the Apple App Store.
- Optimized map rendering and state transitions to ensure smooth navigation during high-density asset tracking.

Surveylenz (1000+ Daily surveys)

- Digitized household and public transport surveys with Google Maps and real-time data synchronization.
- Engineered offline-first data caching capabilities to guarantee zero data loss during field data collection in low-connectivity areas.

Speedlenz – Radar Based Violation capture

- Developed native Kotlin modules for radar-based speed violation detection and automatic image capture.
- Processed real-time vehicle speed data from handheld radar devices with low-latency socket communication.

DC Cam – TUYA Camera Management system

- Implemented real-time previews, room-based management, and SD card controls for Tuya smart cameras.
- Integrated the Tuya SDK and customized device controllers to handle secure pairing, telemetry, and remote storage configuration.
- Designed responsive UI components to efficiently manage state changes across multiple concurrent live camera feeds.

TECHNICAL SKILLS

Languages & Frameworks: Dart, Flutter, Kotlin, Jetpack Compose, Python, Django

Architecture & State Management: BLoC, Riverpod, GetX, GoRouter, DI, MVVM, Material Design

Backend & API: GraphQL, gRPC, REST, WebSocket, IoT Integration

Cloud & Services: AWS (S3, RDS), CI/CD, Firebase (Auth, Push Notifications, Analytics, Crashlytics), GCP

Database: PostgreSQL, SQLite, Hive

Tools & QA: Agile, Figma, Git, Bitbucket, Jenkins, Scrum, Widget/Unit Testing

EDUCATION

Bannari Amman Institute of Technology, Sathyamangalam

B.E. in Computer Science & Engineering

2024 | CGPA: 9
